

Brute Force

No. of permutations
 $= 3! = 3 \times 2 \times 1 = 6$

1	2	3
•	1	2

res = $\{\{1, 2, 3\}, \{1, 3, 2\}, \{2, 1, 3\}, \{2, 3, 1\}, \{3, 1, 2\}, \{3, 2, 1\}\}$

$T = O(n! * n)$ [$O(n!)$ time to generate $n!$ permutations and $O(n)$ time to copy each permutation to resultList]

$S = O(n) + O(n) + O(n)$ [$O(n)$ for stack; $O(n)$ for tempList; $O(n)$ for HashSet]

So, $S = O(n)$

Optimal Approach

Intuition →

1 can be in all three positions
